

# Lyptus™\*

■ BR022

Photo : Weyerhaeuser

## ■ Scale of Density

Soft Wood

Hard Wood

## ■ Description

Light brown and pinkish to intense reddish brown

## ■ Features

It's about a natural hybrid of the "Eucalyptus grandis" and the "Eucalyptus urophylla". The lyptus quickly grows thanks to the warm climate of Brazil, allowing the cutting after 10-12 years instead of 50 - 70 years in the colder regions. This essence turns darker with the age and the time to offer a deep and particular coloring.

## ■ Origin

South America

## ■ Area

Principally in Brazil

## ■ Family

Exotic broad-leaved trees - *Myrtaceus*

## ■ Grain

Fine

## ■ Thread

Right

## ■ Properties

Very heavy, very hard and very lasting

High-quality

Remarkable beauty

Exceptional handiness

Ecological

Renewable

## ■ Uses

Mouldings

Wall Paneling

Interior Doors

Stairs

Moulding Accessories

Carpentry Wood

Flooring

Wood is a natural raw material offering variation of colours; the product can differ a little than sample above. Also, the photographs can be faded because of the natural or varnished condition of the wooden strips and the printing quality
